DETAILED ACTION

Applicants' arguments, filed March 04, 2009, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office Action.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 20 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 20 recites the limitation "active ingredient substance" in claim 11 there is no recitation of "active ingredient substance". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 11-12 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Box et al. (WO 03/024439, as disclosed by applicant) in view of Keller et al. (US Patent No. 6,645,466, previously disclosed).

Box et al. disclose a dry powder composition for topical delivery to the lung by inhalation comprising lactose (p. 25, lines 21-26) and 4-((1R)-2-((6-{2-[(2,6-

dichlorobenzyl)oxy]ethoxy}hexyl)amino]-1-hydroxyethyl]-2-(hydroxymethyl)phenol (p. 13, lines 17-18).

Box et al. differs from the instant claims insofar as it does not disclose a composition comprising magnesium stearate.

Keller et al. disclose an inhalable pharmaceutical dry powder formulation that comprises an active agent and magnesium stearate (Abstract). Keller et al. disclose the active agent present at 0.1 to 10% by weight based on the total formulation (column 7, lines 16-18) and magnesium stearate can be present in a concentration of 0.001 to 10% based on the total weight of the formulation (column 8, lines 28-30). Keller et al. disclose the use of magnesium stearate improves the resistance of the dry powder formulations to atmospheric humidity (column 4, lines 44-46) and further improves the storage stability (column 4, lines 47-49).

Keller et al. differs from the instant claims insofar as it does not disclose an inhalable solid pharmaceutical formulation comprising 4-((1R)-2-[(6-{2-[(2,6-dichlorobenzyl)oxy]ethoxy}hexyl)amino]-1-hydroxyethyl]-2-(hydroxymethyl)phenol.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have used magnesium stearate in the inhalable composition of Box et al. motivated by the desire to form a dry composition that is resistant to atmospheric humidity and has improved storage stability as disclosed by Keller et al.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
